

# Resetting a Namibian Mobile Fiber Optic Router

## Overview

Check your router for the reset button or WPS button. This button is usually located on the back or bottom of your router. Press and hold the button for ten seconds. Resetting the fiber internet router or modem allows it to refresh and clear any temporary glitches or errors that may be causing connectivity problems. It essentially reboots the device and restarts all its processes, which can often resolve issues like slow internet speed, network connectivity. Restarting the router involves turning the device off and on to resolve connection issues or improve network performance. It is important to note that. Inspect the Fiber Optic Cable Look for physical damage, cuts, or bends in the fiber optic cable. Sometimes a Google Fiber device gets into a state that requires you to restart (also known as "Power Cycle") or perform a factory reset.
