

Rfog optical backhaul module

Overview

The RFoG WDM module is designed to satisfy wavelength management requirements where 1310, 1490, 1550 and 1590 / 1610nm wavelengths are used in passive optical network applications. This unit is available in traditional LGX module packaging with virtually all connector options. The optical platform WISI Optopus is notably flexible and serves high-density needs for all kinds of RF optical networks. The WISI Optopus meets any carrier's. RFoG is a simple way for multiple system operators (MSOs) to bring fiber to the home using their existing infrastructure. Don't miss out on our tech updates. Features • Flexible packaging. Sealight's SL-HUB RFoG quad return combining transmitter is ideal for combining & retransmitting multiple RFoG 1610nm return passive optical networks into a single service group in RFoG repeater applications, and PON overlay networks. Sealight's RFoG repeater module (RRM) is a field-hardened.
