

Seismic Bracing for Cable Tray Sides

Overview

Seismic bracing, typically made of high-strength metal, is key component specifically designed to enhance the stability and safety of cable tray systems during earthquakes. In regions prone to seismic activity, ensuring that your cable tray system is capable of withstanding such events is vital. For over 60 years, the mechanical, electrical, and fire protection trades have relied on TOLCO seismic bracing solutions. [us/cablofil](#) for complete seismic catalog Earthquake Sway Brace Systems for Cable Trays Legrand/Cablofil has joined with Loos and Company, the industry's top manufacturer of Seismic Wire Rope/Cable™ Bracing, to provide a comprehensive and unique line of. High-seismicity projects place much greater demands on cable tray systems than ordinary installations. During an earthquake, cable trays are exposed not only to gravity loads and normal service loads, but also to lateral movement, vertical acceleration, vibration, and building drift.
