

Swedish self-supporting optical cable

Overview

Designed specifically for deployment alongside power lines and utility poles, ADSS eliminates the need for metallic components and external support structures, making it a go-to choice for power grid communications, smart cities, and rural connectivity. 4 Optical ground wire (OPGW) and optical phase conductor (OPCON) This Part 2-18 is applicable for installation of OPGW and OPCON, also known as OPPC, in overhead lines in Sweden. Prysmian has a built-in multi-step quality assurance programme, which covers the entire production process from cable design and raw materials purchasing, to final inspection for any single project. Stranded loose tubes wrap around the core, with all components made of non-metallic materials. This. AFL-ADSS® (All-Dielectric Self-Supporting) fiber optic cable is designed for outside plant aerial transmission and distribution environments.

OverviewConstruction detailsAccessories and installationApplication issues

All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements. It is used by electrical utility companies as a communications medium, installed along existing overhead transmission lines and often sharing the same support structures as the electrical conductors. ADSS is an alternative to OPGW and OPAC with lower installation cost. The cables are designed to be s
