

The router can be used directly after plugging in the fiber optic cable

Overview

Q: Can I plug a fiber optic cable directly into a router?

A: Only if your router has an SFP port designed for fiber. Q: Do I need a special router for fiber optic internet?

A: While not all routers support fiber, many modern models. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Ask them if they can disable any "router" functions in the ONT to let you use your own router. They will likely run fiber to your house and then from there use a converter to. The provided modemrouter has a female optical port (I guess it's called SFP or ONI, I still have to understand that) and all the products I am seeing here have an ethernet WAN port. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid. The router the ISP gave you is the optic fiber -> rj45 converter you are looking for. @Kristijorgji: "Media converters" will not work for you, because they deal with a different kind of network; they're made.
