

US Cable Tray Classification

Overview

The nema standard for cable tray is defined under NEMA VE 1 and NEMA VE 2 guidelines. These standards are developed by the National Electrical Manufacturers Association to regulate the manufacturing and installation practices of cable tray systems. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. It is the first joint effort of NEMA and CSA International to put in one place standards for metal trays per both NEMA and CSA methods. Consider NEMA as a kind of rating system that ensures that a tray will not be bent or broken in case of full of heavy power cables.
