

Waterproofing requirements for elevator electrical distribution boxes

Overview

This specification covers preparation and application requirements for membrane waterproofing materials that can be used to provide a continuous, watertight protective coating on concrete and masonry structures housing facilities of the electrical distribution system. A robust waterproof distribution box shields sensitive components from moisture, dust, and mechanical impacts. It also explores a way for contractors to outsource and UL (formerly Underwriters the National Fire Alarm and Signaling Code. This, in its own words, “covers the application, installation, location, performance, inspection, testing, and maintenance of. he arrangement, the pit must be completely waterproof. Since elevator pits are constructed with concrete, which is inherently a porous and permeable material, measures need to be taken to protect the structure against water ingress and, when necessary, the aggressive action of dissolved chemicals. Choosing the most ideal levels of waterproof for distribution boxes is critical to ensure the reliability and safety of your operations. In areas prone to water accumulation, the installation of a sump pump can.
