

What are five common network security devices

Overview

The main types of network security devices include firewalls, intrusion protection systems (IPS), unified threat management (UTM) systems, network access control (NAC), email security gateways, web application firewalls (WAF), and VPN gateways. These devices act as barriers between the internal network and potential threats from the outside world. Whether you're a business owner or an IT professional, understanding the. On top of the many network devices that any enterprise should have today, there are a selection of network security tools and devices that can help you defend your network. While networking security tools have traditionally been implemented as on-prem network security hardware or virtual. Network security solutions are specialized hardware devices designed to protect networks from cyber threats, and modern innovations like Juniper Mist networking for secure, scalable infrastructure further enhance visibility, automation, and overall network performance.
