

What does fire-retardant protection for cable trays include

Overview

Surfaces should be coated with fire-retardant paint to slow flame spread and increase heat resistance. Install fire barriers within the tray to isolate different fire zones. When cable trays pass through walls or floors, seal openings using fire-rated penetration. ProReact Linear Heat Detection (LHD) offers a proven solution. Engineered for continuous monitoring and early warning, our cable-based detection system is ideal for protecting cable trays—whether single-tier, multi-tier, or densely packed. Understanding the importance of fire protection for cable trays is essential for maintaining a safe. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations.
