

# What interfaces does the light control module require

## Overview

Communication between controllers, sensors, users, and luminaires via interfaces like 1-10 V, Push-Dim, DMX, or DALI for efficient lighting control. Interfaces are necessary for different components within a light management system to communicate. All relevant information is gathered and processed in the control device, and then transmitted to the components if necessary. Interfaces exist between the control device and the luminaires' control. Crestron lighting and automation solutions provide excellent value and performance, comprising a comprehensive line of modular enclosures, wall-box dimmers, and climate control thermostats that are controlled by a powerful Crestron 4-Series™ Control System. Crestron offers a complete selection of. LCMB12WB has an integrated communication BUS interface to facilitate connection to a BUS loop enabling interaction with a wider lighting control system. Instead of relying solely on traditional wall switches, you can control your lights via remotes, mobile or web apps. Intelligent Lighting Controls' Interfaces & Accessories help deliver energy savings and are user-friendly.
