

What is a single-unit cable tray

Overview

A channel cable tray is a compact, single-piece tray system with a narrow base and raised side flanges. Unlike ladder or trough trays, channel trays are designed to support small cable quantities over short distances. Their construction is based on the international standard IEC 61537, which is a welded wire-mesh cable management system made of high-strength steel wire. Cable weight, heat generation, bend radius, environmental exposure, and maintenance access all directly influence which cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to ensure, overheating or. According to the National Electrical Code standard of the United States, a cable tray is a unit or assembly of units or sections and associated fittings forming a rigid structural system used to securely fasten or support cables and raceways. Several types of tray are used in different. The Cisco Compatible logo signifies that Eaton's product has undergone interoperability testing by Eaton together with Cisco and a third-party test house based on testing criteria set by Cisco.
