

What to do about the FC interface

Overview

When you configure the switch as an FCoE-FC gateway, you assign one or more (up to 12) native Fibre Channel (FC) interfaces and at least one FCoE VLAN interface to each FC fabric. FC interfaces transport native FC traffic between the proxy gateway and the storage area network (SAN) FC. This chapter provides information about Fibre Channel interfaces, its features, and how to configure the Fibre Channel interfaces. Your software release might not support all the features documented in this module. For the latest caveats and feature information, see the Bug Search Tool at. An FC SAN provides an external storage environment for servers by using the FC protocol suite. Figure 1 shows three FC SAN networking methods. The default type of an FC interface is F_Port.
