

Why change your router when switching to fiber optic internet

Overview

To make the most of it, you might need a new Full Fibre router to handle the faster speeds, and updating your phones for VoIP calls is a good idea. Also, ensure that your networking devices and smart home gadgets are compatible. Usually how it works, is there is a box mounted on the side of your house which receives the line, then inside the house, you'll have a network jack installed - or they will tie it into your existing house wiring if you have cat5 installed already. You just plug your router right.

Understand the Equipment Needed: Typically, switching to fiber internet requires an Optical Network Terminal (ONT) and a compatible router to handle the high speeds and bandwidth of fiber-optic technology. More people than ever are doing something about cable providers who offer high prices, a lousy customer experience, and bandwidth that can't handle today's heavily connected lifestyle. They're switching to fiber optic Internet providers. It's easy to understand why people want.
