

Wiring method for incoming electrical wires and distribution boxes

Overview

1) Generally, the incoming line of power distribution box adopts five wire system, that is, a, B and C three-way phase line (the general color is yellow, green and red), one way zero line (the color is light blue) and one way ground line (the color is yellow with green). 1) Generally, the incoming line of power distribution box adopts five wire system, that is, a, B and C three-way phase line (the general color is yellow, green and red), one way zero line (the color is light blue) and one way ground line (the color is yellow with green). A distribution box is the heart of any electrical system. It takes the incoming power and safely distributes it to different circuits throughout your building. 3 phase DB box wiring is an essential component of electrical installations in commercial and industrial buildings. Whether it is residential buildings, commercial facilities or industrial sites, the. The dimensioning of an electrical plant requires knowledge of different factors relating to, for example, installation utilities, the electrical conductors and other components; this knowledge leads the design engineer to consult numerous documents and technical catalogues.
